

1 **WHAT IS CLAIMED IS:**

2 1. An in-vehicle video/audio display device comprising:

3 an engagement base (10) defined with a shallow cavity (11), wherein the
4 engagement base (10) is adapted to be embedded in a desired position in a
5 vehicle;

6 a disc player (20) securely retained in the cavity (11) of the engagement
7 base (10), wherein a first pivoting mechanism (23) is formed at a top edge of the
8 disc player (20);

9 a display panel (30) having an inner surface for image display and an
10 outside surface on which a second pivoting mechanism (31) is formed;

11 an angle adjusting plate (40) having two opposite edges along which a
12 first pivoting block (41) and a second pivoting block (42) are formed, wherein
13 the two pivoting blocks (41)(42) are respectively connected to the first pivoting
14 mechanism (23) and the second pivoting mechanism (31), whereby the display
15 panel (30) is pivotally linked to the disc player (20);

16 wherein after the first pivoting mechanism (23) and the second pivoting
17 mechanism (31) are adjusted to a desired angle, the display panel (30) is
18 maintained at the angle.

19 2. The video/audio display device as claimed in claim 1, wherein the
20 engagement base (10) is formed as a rectangular body.

21 3. The video/audio display device as claimed in claim 2, wherein the
22 disc player (20) has a disc retaining chamber (21) in which a disc to be played is
23 placed, and a plurality of operation buttons (22) to be pressed by users is
24 provided around the disc retaining chamber (21).

1 4. The video/audio display device as claimed in claim 3, wherein the
2 display panel (30) is a flat type LCD display device.
